DETAILED ACTION

Examiner Comment

The applicant is kindly asked to update the information on page 4 of the specification to reflect current USPTO application data.

The applicant is kindly asked to submit formal drawings in response to this office action as the drawings are informal.

Allowable Subject Matter

Claims 1-3, 7-11, 15 and 17-19 are allowed.

As best understood, claim 1 recites a system comprising a selection means and an output means. In response to an input (entered product information), a build plan is selected and then is outputted. The build plan includes information about tool versions, wherein the different versions may perform the same machining operation. The user of the system needs to previous knowledge of the tools or versions thereof.

The closest available art appears to be issued to Csipkes et al., U.S. Patent No. 6,188,402, which discloses that a user selects a product to be assembled (e.g. an amplifier). This step is interpreted to correspond to the claimed step of entering product information. Csipkes et al. then discloses that the next step comprises selecting processes needed to build the product. This step is interpreted to correspond to the claimed step of a build plan being selected. (e.g. See C3 L28-33). The appropriate steps are then outputted to the appropriate line operator (e.g. See C4 L59-64).

However, Csipkes et al. does not specifically disclose a machining tool version being conveyed to the operator, the tool version being representative of a machining operation, per se.

A "machining operation" has been interpreted in light of Wikipedia's definition of the term, and further in light of applicant's explicit disclosure describing specific details which are commensurate with this definition.

Wikipedia generally describes machining operations as falling under three principle classifications, those being turning, drilling and milling. The examiner will interpret the term machining operations and therefore a tool version emanating therefrom, to be inclusive of these three categories of processes.

As previously mentioned, Csipkes et al. clearly does not disclose machining operations, per se. That being said, it would appear that Clark et al. discloses the closest pertinent art available with regards to this missing feature.

Clark et al., U.S. Patent Application Publication No. 2005/0038541 discloses an assembly line that allows for detailed instructions on how to build a product to be conveyed to operators along the line, which is the same field of endeavor as 6188402. Further 20050038541 discloses displaying tool version (specific types of wrenches) data to an operator (e.g. See [0013]).

The disclosure of Clark et al. teaches using a specific type of wrench, but does not disclose a specific type (version) of machining operation. In other words, in the examiners opinion, using a wrench is not considered a machining operation, it merely represents a physical operation using a tool, whereas turning, drilling and milling all represent machining operations.

It is further noted that the interpretation of machining operation is commensurate with the applicant's disclosure of utilizing a drilling operation.

For at least these reasons, the prior art of record fails to disclose the overall claimed features of at least independent claim 1 for at least the reasons set forth above.

Art Unit: 2121

Claims 2-3 and 7-8 depend from claim 1.

With regards to independent claims 9 and 17, the rationale applied with respect to claim 1, from above, is further applied herein.

Claims 10-11, 15 and 18-19 depend from claims 9 (10-11 and 15) and 17 (claims 18-19).
